UNOS Vision for the iPad: UMAN announces the iPad version of its freeware browser UNOS Vision

After the successful presentation of the UNOS network operating system at the prolight+sound 2010, UMAN GmbH has announced its latest development: an iPad-compatible version of the UNOS Vision freeware browser: "The iPad is just the beginning," promises UMAN Managing Director Jürgen Scheuring

Dusseldorf / Munich, September 2010 – Earlier this year, UMAN GmbH presented for the first time its network operating system UNOS at the prolight+sound trade fair in Frankfurt. With great success. The software has quickly established itself in the months since as the manufacturer-independent command and control standard in the AV industry. To further this development, UMAN is now presenting its latest software: an iPad-compatible version of its freeware browser UNOS Vision.

"The iPad implementation is only the first of a series of new and revolutionary user interface concepts that UNOS is going to be presenting in the near future," says Jürgen Scheuring, UMAN's

Universal Media Access Networks

Managing Director. "Users of complex media equipment these days expect far more than just PC software for the manufacturer-specific remote control of devices. What they want are highly integrated, platform-independent systems."

The iPad version of UNOS Vision is a further extension of netOS, which offers manufacturer-independent command & control for AVB and proprietary networks. Furthermore, UMAN is demonstrating once again with the new implementation the enormous flexibility of UNOS. UNOS users are now able to offer their customers immediately the iPad version of UNOS Vision—an attractive, forward-looking service that constitutes, moreover, a significant competitive advantage. "The iPad is going to become widely established in the market. Many users will therefore soon be availing themselves of our service."

Upon request, anyone interested can test a demo version online.

About netOS UNOS

In its Universal Network Operating System (UNOS), UMAN is offering a comprehensive platform- and network-independent software for audio, video and lighting networks. UNOS provides devices with a streaming interface as well as an uncomplicated and powerful graphic user interface (GUI). UNOS offers manufacturers rapid and risk-free migration to Ethernet audio-video bridging (AVB) without costly in-house development. UNOS netOS is divided into three program groups: UNOS Core, UNOS Creator and UNOS Vision.

The platform-independent freeware browser Vision runs under the Windows, Mac OS, Linux and iPhone operating systems and makes it possible for users to control all connected devices remotely in a single UNOS-controlled network.

About UMAN. Inspiring networks

The UMAN Universal Media Access Networks GmbH is the software think tank responsible for the development of the UNOS (Universal Network Operating System). UMAN sees its role as that of a strategic partner for innovative technological enterprises. With its UNOS products and through the provision of development services, UMAN offers its clients solutions for the simple and risk-free implementation of network technologies.

UMAN GmbH was founded in 2007 and is based in Dusseldorf. The development team comprises eight engineers and scientists based in Grahamstown, South Africa.
